

Data Box

The AVer POS-DVR surveillance system provides visual text awareness to help reduce shrinkage and protect assets against business losses. AVer's DVR/NVR series can be seamlessly integrated with POS machines through the Data Box, thus all transaction data can be overlaid on the live image for recording and can be searched for easily using keywords.

features

- accepts different POS machine interfaces: RS-232 and parallel port
- plug & play, no more complication
- compatible with commonly used POS systems

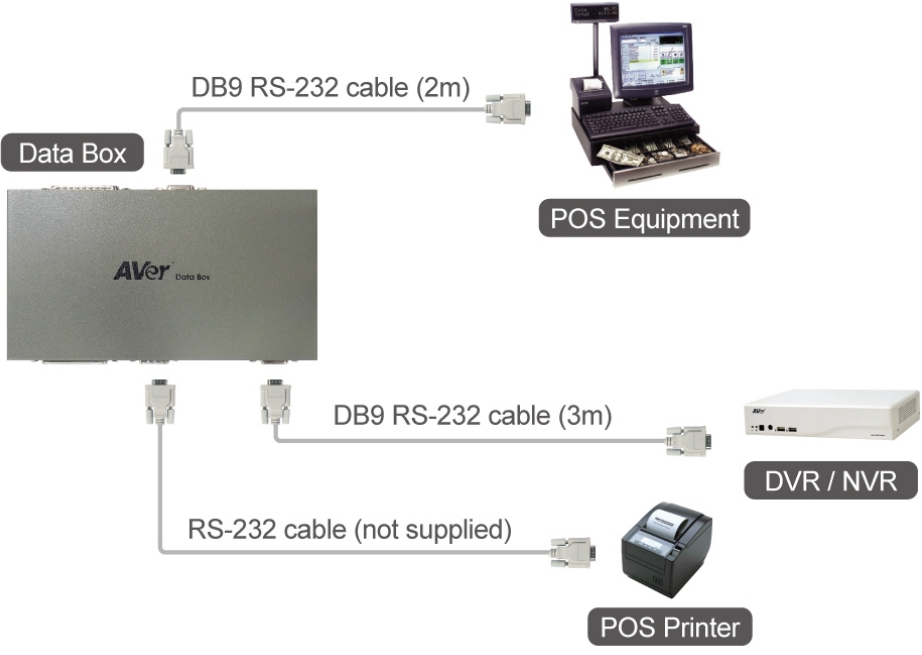

for NV/IWH series

- receives transaction data from the POS machine
- captures POS transaction data to DVR
- changes location and color of POS text on the displayed camera image
- confidential Word filter
- quick search of POS events via transaction keywords
- iPOS feature for adding customized POS protocol

for EH series

- receives transaction data from the POS machine
- captures POS transaction data to DVR
- changes location and color of POS text on the displayed camera image
