

iPOS function

The iPOS function is effective for helping customers to prevent stock shrinkage, balance shortage, and ensure trade security. The iPOS function is an advanced tool for POS management providing not only visual contextual awareness but customized protocols for various demands and wide applications.

features

AVer's surveillance DVR series is integrated with most brands of POS machines on the market. The iPOS function enables users to set POS protocol, edit the settings of the POS machine, view real-time POS data overlay on a live video display or in a separate POS window, and search POS data efficiently by POS keyword and transaction time.

(iPOS function is fully integrated with Windows® based DVRs)

iPOS Editor

- supports most POS brands on the market
- easily create customized POS protocols for your POS device by yourself
